

# MERN Stack JavaScript Assignment

This assignment is designed to prepare students for real-world MERN Stack development. All tasks must be implemented using pure JavaScript and executed in the console using: node

taskManager.js

## JavaScript Foundations (Beginner)

- Create a tasks array to store task objects.
- Task structure: id, title, status (pending/completed).
- Implement addTask(title) with auto-increment id.
- Implement getAllTasks() using console.table().
- Implement completeTask(id).
- Implement deleteTask(id) using filter().
- Must use arrow functions, map(), filter(), and find().
